	Key Features: Majority of the materials are written so that students discover the mathematics. Through the use of manipulatives, models, and hands-on activities, students actively learn the concepts. The rules and algorithms usually associated with mathematics are often student-derived, rather than given in the text. Explaining why an algorithm works helps students internalize the procedure. Some concepts or application do not lend themselves to discovery learning, direct instruction is also used. Book 1 is written to provide exceptional activity-based learning with new, flexible teacher tools that help you reach all students.
